South Sudan has the highest maternal mortality ratio (MMR) in the world, at 2054 deaths per 100,000 live births, and some of the poorest indicators on infant and child health, with mortality rates as high as 84 and 105 per 1000 live births, respectively. Only 46% of women go for the first antenatal care visit, out of which 30% are seen by a skilled provider. Fifteen percent of births are attended by a skilled healthcare professional and less than 25% of the population has access to healthcare.
